EXTERIOR

Air Curtains.

Vertical air intakes ahead of the front wheels - so called Air Curtains - also improve the aerodynamics, by guiding incoming air over the wheels like a curtain, reducing turbulence.

LED headlights.

Matrix Design pulls together all the lighting functions into a single component, making it look as if they're suspended in the air. Additionally, the headlights have four points that provide additional light.

Door handles.

The vehicle has a profile that is defined by a flat, dynamic flyline with an extended, sporty door handle. The interior is deep and sporty, with an automatically extending handle on the doors.

Glass roof.

The car comes with two different roof styles. The first is a lightweight aluminum with a center indentation. The second is a panoramic fixed glass roof that provides an open and airy feeling. Both styles are commonly seen in motor-sports.

Rear design.

The Porsches' rear boasts a seamless light strip and 'PORSCHE' logo made of letters that appear as though they're embedded in glass. Above the logo is the PAA, or Porsche Active Aerodynamics, in the form of a three-stage rear spoiler.

ELEVATES EVERY MOMENT.
